SUMMARY

Backend Developer skilled in Python and Django with experience building scalable RESTful APIs, authentication systems, and database-driven applications.

Hands-on experience in computer vision and machine learning, including real-time object detection and model deployment. Familiar with Docker and Azure for application deployment. Passionate about building efficient backend systems and production-ready applications.

TECHNICAL SKILLS

- Languages: Python
- Frameworks: Django, Django REST Framework, React
- Databases: PostgreSQL , MySQL
- Backend: REST APIs, JWT Authentication, API Integration
- Machine Learning: Computer Vision, YOLO, NLP, Scikit-learn
- Cloud & DevOps: Docker, Azure
- Tools: Git, GitHub.

PROJECTS

Browsing Center Management System

Django, React, PostgreSQL

- Developed a role-based web application to manage daily service transactions for a browsing center.
- Designed REST APIs and implemented JWT + Google OAuth authentication for secure user access.
- Built PostgreSQL database models to manage transactions, reports, and user roles.

IPL Match Prediction System

Python, Django, HTML, CSS

- Developed a web application to simulate IPL match predictions and dynamic leaderboard updates
- Implemented backend logic to update points table and match outcomes in real-time
- Designed database schema for matches, points table, and playoff predictions

Railway Track Obstacle Detection System

Python, YOLO (Ultralytics), OpenCV, Streamlit

- Built a real-time computer vision system for railway track segmentation and obstacle detection
- Implemented end-to-end pipeline: video capture - frame processing - object detection - alert system
- Optimized model inference for real-time performance (~X FPS)
- Deployed using Streamlit for live monitoring

EDUCATION

Bachelor of Engineering in Computer Science
University College of Engineering, Villupuram
Oct 2022 - Apr 2026.

CERTIFICATIONS

Python Programming - Besant Technology (2025).

Data Analytics: Real-World Hands-on Project.
